Application/Control Number: 10/033,505

Art Unit: 2631

DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/033505, filed on 12/27/2001.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter:

Watanable (US Pub. 2002/0009169) discloses a skew correction method wherein the transmission system transmits a predetermined data pattern for skew correction to the receiver wherein a delay value is set and several stages of shift register are provided for each transmission channel and the receiving data are received only after passing through the shift registers so that the data patterns for skew correction of the transmission channels are in phase with each other. Prior to the skew adjustment, the received signals are given to clock recovery circuits 222. Lippet et al (US Patent 6,667,993) teaches a communication channel that has a transmitting unit and a receiving unit wherein a single stream of data is divided into a plurality of sub-streams of data and inserts a frame pulse periodically in each sub-stream of data. The received sub-stream of data, the byte clock and the frame pulse of each slave received data sub-stream is synchronized to the byte clock and the frame pulse of the master received

data sub-stream such that the skew is eliminated. The prior art fails to teach a bit change-over portion for changing over bits of the parallel signals and the serial code signals based on clocks recovered by the clock recovery portion and a bit shift detector for detecting bit shift amounts of the parallel signals outputted from the bit change-over portion based on the serial code signals, and a variable delay portion for performing skew adjustments of the parallel signals outputted from bit change-over portion depending on the bit shift amounts.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Loeb et al (US 5,157,530), Jones et al (US 6,819,683), Quinlan et al (US 6,275,880), and Herrity (US 6,735,397).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Freshteh N. Aghdam whose telephone number is (571) 272-6037. The examiner can normally be reached on Monday through Friday 9:00-5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on (571) 272-3021. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
